

AirHawk Seat- The Difference!

Courtesy of Airhawk

The proof is in the pressure mapping!

Gel/Foam Seat

AIRHAWK Seat

Gel/Foam Seat AIRHAWK Seat Medically proven pressure mapping illustrates the AIRHAWK difference. Our AIRHAWK Shape Fitting Technology® adjusts to your contour to eliminate painful pressure points and increase riding comfort. Small interconnected air cells evenly distribute your weight and pressure over the entire motorcycle seat cushion, reducing the "hot spots" that cause pain. The air cells also work as mini shock absorbers, reducing vibration. Once you've tried it, you won't ride without it! Here's the deal- Test ride any AIRHAWK for 60 days. If AIRHAWK doesn't DOUBLE the distance you are able to ride in comfort, simply return it for a full refund. Is that a guarantee?
