Helen Twowheels™ K1200LT Strap Instructions

The K1200LT straps are meant to be a long-term way to hold bags on the passenger seat. Once installed, if not in use, the straps can be placed in each side case with the cases shutting over the straps.

To install, unlock and flip-up your front seat. You will then be able to loosen and remove the two bolts that hold the passenger seat in place. Once the passenger seat is removed, the middle, single section of the strap should be placed directly under the seat. There will be a short section with d-rings and a longer section without hardware on each side of the bike. Orient the straps so that the short section with d-rings is on top. Re-install the passenger seat and flip the front seat down. Your straps are now installed!

You will be able to wrap the two sides around your bag(s) to secure them on the passenger seat. The medium or large clothes sacks work very well for this application. When not in use, the two sections of the straps on each side of the bike can be placed inside your case, with the case shutting over the straps.
