## Video/Data Acquisition Systems

RPW carries eight very popular video and video/data acquisition systems used in motorsports. As a consumer, it can be a challenge deciding which system will work best for you. We've put together a comparison chart to help you decide which system best fits your needs. RPW has sold, assembled and maintained video systems for many years.

The video systems are in no particular order but are generally least expensive to most expensive. Some systems have several additional options that will add to the overall cost. Download of video to PC/Laptop is fairly straightforward on all systems. The same goes for upload to video sharing websites. For both video and data, the Race-Keeper system includes software for synchronization of video and data. Motocam, Chasecam, Traqmate, and Stack require optional software and/or hardware for this.

### Some basic questions to ask yourself in trying to decide which system is for you are:

- What will the video be used for? Entertainment? Track days? Testing? Race?
- Is the goal faster lap times? If so, then consider a system that includes a data overlay of gauges and track mapping.
- Do I want or need multiple camera views?
- Will I need a remote start or Auto record feature? (Useful when the driver can not reach the recording device to turn it on/off.)
- How much recording time do I need?

Some of these questions can lead to more questions that cannot be answered by a simple chart. Please contact us if you have further questions and we'll be happy to guide you through the rest of your decision making process.
